<b>Antibiogram of Blood (July 2023 – Dec 2023)</b>		
<b>Total Samples</b>	<b>2917</b>	<b>100%</b>
<b>Culture positive</b>	<b>641</b>	<b>22%</b>
<b>Culture negative</b>	<b>2276</b>	<b>78%</b>
<b>Total Gram positives</b>	<b>295</b>	<b>46%</b>
<b>Total Gram negatives</b>	<b>255</b>	<b>39.8%</b>
<i>Staphylococcus aureus</i>	<b>102</b>	<b>34.6%</b>
<i>Coagulase negative Staphylococci</i>	<b>146</b>	<b>49.5%</b>
<i>Enterococcus</i> species	<b>47</b>	<b>15.9%</b>
<i>Escherichia coli</i>	<b>20</b>	<b>7.8%</b>
<i>Klebsiella</i> species	<b>16</b>	<b>6.3%</b>
<i>Citrobacter</i> species	<b>02</b>	<b>0.8%</b>
<i>Salmonella</i> species	<b>02</b>	<b>0.8%</b>
<i>Proteus</i> species	<b>1</b>	<b>0.4%</b>
<i>Pseudomonas</i> species	<b>83</b>	<b>32.5%</b>
<i>Burkholderia</i> species	<b>38</b>	<b>14.9%</b>
<i>Acinetobacter</i> species	<b>93</b>	<b>36.5%</b>
<i>Candida</i> species	<b>91</b>	<b>14.2%</b>

**Note:** An unexpectedly high yield of positive blood cultures has been primarily contributed by isolation of high numbers of Coagulase negative *Staphylococcal* species, which are usually regarded as skin contaminants unless proved otherwise. This in-turn reflects poor skin disinfection practices at the venipuncture sites while drawing blood for cultures.

Antimicrobial sensitivity patterns for isolates less than 30 have not been mentioned as is recommended by CLSI.

Antimicrobial sensitivity pattern of *Candida* species has not been mentioned as the same is not done in the department because of non-availability of reagents.

## Percentage Sensitivity of Gram-Positive organisms (Blood)

<b>Organism (n=295)</b>	<b>Isolates %</b>	<b>Penicillin</b>	<b>Ampicillin</b>	<b>Clindamycin</b>	<b>Gentamicin</b>	<b>High level Gentamicin</b>	<b>Vancomycin</b>	<b>Ciprofloxacin</b>	<b>Linezolid</b>	<b>Teicoplanin</b>

**Note:** For Staphylococcus, Vancomycin was not tested because the recommended method is MIC, however majority of Staphylococcal isolates are expected to be vancomycin susceptible.

1. MRSA and MR-CONS are considered resistant to all Beta-lactam antibiotics except cephems with anti-MRSA activity (eg., Ceftaroline and Ceftobiprole).
2. All MSSA and MS-CONS isolates are likely to respond to drugs like Cloxacillin, Dicloxacillin, Flucloxacillin, Nafcillin, Cefazolin,  $\beta$ -Lactams and  $\beta$ -Lactam Inhibitor Combinations.

<i>Burkholderia</i>	14.9%	-	76	-	-	-	75	46	-	77	52	-	76

**Note:** Colistin and Polymyxins are to be tested by MIC only, for that reason they are not mentioned in the antibiogram.

(-) Drugs either intrinsically resistant or not tested.
